World Geography explores the concepts, tools, and importance of geography through physical and human perspectives. It emphasizes interactive activities to foster awareness in children aged 2-5. The text covers basic geography concepts, its significance, and the role of thinking globally. World Geography also delves into advanced topics like climatic elements, biogeography, vegetation, soils, and climate change. A separate introduction provides an overview of geography's importance in understanding the world through spatial analysis, earth science, area studies, and human-landscape interactions. Additionally, the text includes a comprehensive guide for geography students, covering department resources, faculty profiles, program details, and post-graduation opportunities. It also synthesizes key concepts in economic geography, exploring location decisions of people and firms. Furthermore, it provides an overview of the continents and selected countries, highlighting geographical features, demographics, and notable facts. In the year 2022, a crucial development is expected to unfold. As a result, secondary school students will be required to adapt to new learning approaches. This change stems from the introduction of a competency-based curriculum in 2020 by the Government of Uganda through the National Curriculum Development Centre. The new curriculum replaced the traditional one, bringing about significant alterations for educators. Prior to this, the Covid-19 pandemic had already wreaked havoc on various aspects of life, including education, with schools forced to shut down.
